We are happy to introduce early Partner access to WordPress Toolkit for cPanel. WordPress Toolkit provides convenient time-saving features, enhanced security, & increased customization options for WordPress installations. We look forward to working with you to deliver this great new WordPress experience to your customers.

WordPress Toolkit Overview

WordPress Toolkit Features

WordPress Toolkit Feature Comparison
Server Requirements

cPanel & WHM versions:
Supported: 86.0.30, 90.0.15, 92.0.0

Operating Systems:
Supported: CentOS 7, CloudLinux 7, CloudLinux 6
Coming Soon: CentOS 8, CloudLinux 8

Processor:
Minimum: 1.1 GHz
Recommended: 2.3 GHz or higher; 4 or more cores

RAM:
Minimum: 1 GB
Recommended: 2 GB or more
1. Log in to Manage2, under the License section, select Add License interface in Manage2:
https://manage2.cpanel.net/addlisc.cgi

2. Enter the IP address(es).

3. Select licensing group (selected by default)

5. Click the “Add License” button.
Configure Partner Store in Manage2

In order to send customers that click the in-product upsells to your store, you must configure a custom store URL in Manage2.

1. Log into Manage2

2. Under Company section, select Update Company Information in the dashboard menu

3. In the Sales Options section of the company page, configure the “Custom Store” option for Purchase WordPress Toolkit:

   Purchase WordPress Toolkit
   
   Custom Store
   
   my.store.com
Installation

1. Run the following command on the server's command line:

2. Retrieve the license from the Manage2 (if assigned):

   /usr/local/cpanel/scripts/wpt_license --download

3. Apply the license to WordPress Toolkit (if assigned):

   wp-toolkit --apply-license

4. Ensure that the server can reach https://ka.plesk.com:443 to renew its license.
Configure feature lists using the WHM *Feature Manager* interface.

The following features are required for offering WordPress Toolkit Lite and WordPress Toolkit Deluxe packages:

</tbody>
</table>
All existing WordPress installations previously added manually, or with another WordPress installer (including WordPress Manager), should be detected during the initial scan following the WordPress Toolkit installation.

To manually migrate any WordPress installation into WordPress Toolkit:

1. Go to WordPress Toolkit in WHM (all accounts) or cPanel (single account).

2. Click Scan.

The WordPress installation will then be attached and visible in the list of existing WordPress installations within WordPress Toolkit.
